

CASCAIS

Introducing the new modular sofa system - CASCAIS, that is a new generation of sofa systems. It's made with more softness and upgraded design in the sewing edges that we use for the first time in our designs. The main differences are in the presentation, Cascais is one new generation that is not tightened like the old models, through the time with use it will become softer and it will have crumpled up look which is integral part from the sofa and the cozy look.

The sofa set includes different seating elements, backrests and pillow which can all be arranged to fit together to create different combinations.

Some main differences that are new moments in producing this new model and the design are:

- 1.** The main difference in this model is that we combine the elastic bends that we use for Choice, Bonbon, Gemini and the pocket springs 13cm and HR foam that we use in Diagon, Matacao 2 so we can create ultra-soft and comfy sofa system.
- 2.** Back-support design changed for higher comfort and elegance. For the first time we implemented metal back supports covered with fabric and additional back support produced with foam and silicon batting that can be choose from 2 different dimensions.
- 3.** The fixing on the sofa is also upgraded, for the connector we made combination from Cuban metal connector and the Velcro stripe that we use in the other models. Its easy for use and the hole sofa is very well fixed.

4. The stitching at the edges of the elements are with decorative dowel, that gives on the sofa more elegant look.

5. For the first time we also use combination of pillows... Because we have a lot of request for bigger pillow that can be used for the head support. In Cascais we made one regular pillow that can be upgraded with only adding the support pillow with zipper and becomes one bigger pillow with headrest. The customer can buy one regular pillow that can upgrade with additional, any time they want.

6. For the coziness that we want to achieve, we made the width of the seating part 90cm, for more comfort while using the sofa.

7. The wooden legs are also new design that can be choose from nature or black color.

8. In the bottom of the sofa there is a storage in where can be placed the metal connector and the legs. When the costumer will receive the sofa all metal backrest, the legs and the fixing connectors will be placed in the storage.

1. Cozy seater

2. Metal backrest

2. Soft backrest

3. Connector

4. New stitching look

5. Adjustable pillow that can become from regular pillow to headrest pillow

7. wooden legs (nature - black)

The legs are made of beech wood and can be ordered in two shades, natural and black.
The height of the leg itself is 8 cm.

8. Storage in the bottom of the sofa for the connector and legs
